Project Title: BuildIt

Automated Testing

Tool: Cypress.io

Website: <https://cypress.io>

Running the test: Open cypress, load the project, and click the test.js script. This opens the browser where you can see the tests get performed real time. Test history is saved and the testing can be recorded for future debugging. Tests are run whenever code is updated in real time.

UAT #1

In Scope – Registration page

Assumption – Account has not been made, user inputs all required data

Test Case – User is able to create an account successfully. Registration fails if not all information is provided. User can sign up as “Builder” or “Contractor.”

UAT #2

In Scope – Login

Assumption – Account has been created and user has login information

Test Case – User is able to enter correct login information and is redirected to his or her profile page. The user can only log in as the proper account type.

UAT #3

In Scope – Forum

Assumption – User is logged in without admin privileges.

Test Case – User creates topics and can post to topics. After posting, the topic or post appears in the correct location. The user cannot post without being logged in. The user cannot create categories.
